We detected some encrypted alien messages. We need to figure out what those messages mean in the alien language. You need to help us decipher them.

LEVEL 1

CIA Agent: We noticed that some letters are more common than others in the alien language.

Your task:

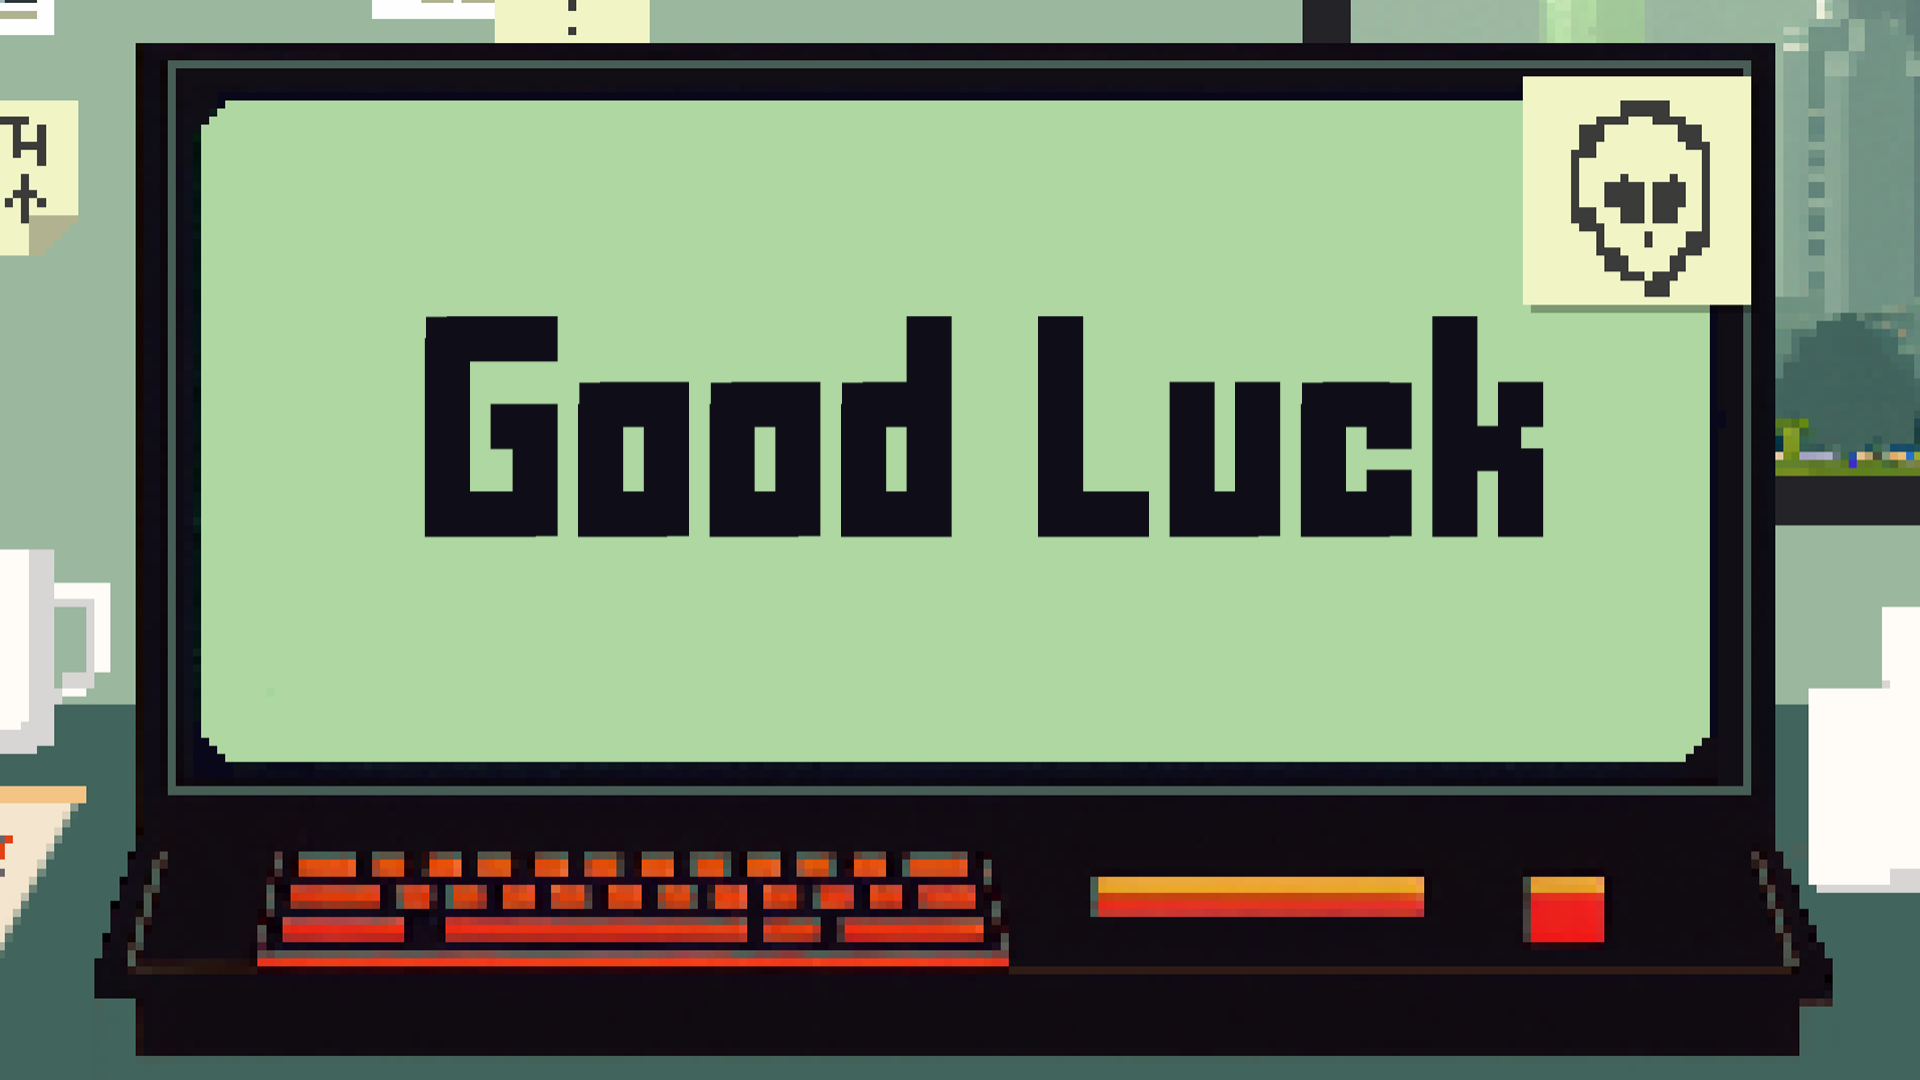
You are given an alien message.

Their alphabet can contain all capital letters, numbers, and some printable ASCII characters*.

Count how often the letter ‘B’ occurs in the given message.

*of course the aliens do not adhere to the ASCII standard, however we substituted all their letters with our characters, so that it’s easier for us to process. Here’s a list of all characters that could occur:
ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789!#%&()[]{}*+-/.?:<>=_|

	Input	Output
Format	message	count
Types	message (string): the alien message	count (int): the number of times the letter ‘B’ occurs
Example	YBM+ YH!BRTBYW NICH +C+NI!HC BSB!T	5



Good Luck
